The Cal Poly Water polo team may not get a chance to defend its league title if funds are not soon made available for it.

Athletic budget proposal cuts seven minor sports

BY KIM BOGARD

Staff Writer

Seven minor sports may not receive funding next year if the recently submitted athletics' budget proposal is approved as is by the Instructionally Related Activities Board.

About 30 concerned student athletes gathered in an open forum Tuesday to express their interest in continuing these sports, which include men's volleyball, tennis, swimming and water polo; and women's softball, tennis, and swimming and diving.

Athletic Director Vic Buccola told the athletes that his main priority in devising the next year's budget was to have "a quality rather than quantity program."

Buccola explained that the budget proposal funded high-priority sports, such as men's football and basketball; and the sports cut from the budget were on the bottom of this priority ranking list.

The purpose of the forum, said ASI President Willie Huff, who acted as mediator, was to try to arrive at an overall solution. Huff said he felt most of the student's questions were aimed at an administrative point of view and should be answered directly by the sports directors.

In addition to Buccola, Associate Executive Vice President of Academic Affairs Howard West and Assistant Athletic Director Dick Heaton were also present at the forum.

Speaker tells how to solve energy crisis by using less

BY ANDREW JOWERS

Editor

The Pied Piper of alternative energy played a simple tune Tuesday night, and led a capacity crowd down the soft energy paths from "living in sieves and driving petropigs" to a world where free-market forces exclude nuclear and other centralized power sources.

Amory Lovins, the slightly-built, fair-skinned and horn-rimmed advocate of "soft" energy alternatives, explained that the United States could bail itself out of the energy crisis in 50 years if the most cost-effective energy technologies—tight building envelopes, passive and active solar, efficient appliances—are used on a large scale. For purely economic reasons, he said, this switch would render already unnecessary and inviable nuclear and fossil fuel power plants obsolete.

The switch is already being made at the community level, he said—the soft path is implementing itself from the bottom up, not the top down.

"Washington will be the last to know," he said.

Himself a native of the capital, Lovins, 33, is considered by many as the most articulate pusher of small-scale, decentralized power sources. The self-described "techno-twit" was joined on stage for a question-and-answer session and in a press conference before the lecture by his wife, Hunter, 31. As joint policy advisors for Friends of the Earth, they travel the globe counseling foreign governments and "cross-pollinating the energy grapevine," he said.

Lovins' services first came into great demand when he propounded his theories in a 1976 *Foreign Affairs* arti-

cle, "Energy Strategy: The Road Not Taken," which broke the magazine's record for reprint requests. He has since expanded his ideas in half a dozen books, the most well-known being *Soft Energy Paths: Toward a Durable Peace*.

Soft technologies—a textural description meaning flexible, resilient, sustainable and benign—are those like solar or wind power that cannot be depleted; hard technologies are those like nuclear and fossil fuel power plants that rely on depletable resources and massive capital investments.

When choosing between soft and hard technologies to solve our energy-supply problem, Lovins told an enthusiastic and easily-humored audience, we must answer four "deceptively simple" questions:

- how much energy do we need?
- what kind of energy and scale are best suited to the required tasks?
- where and for what should we get the energy?
- how can such a policy be implemented?

In answer to the first—how much energy do we need?—he said we require much less than we're using now. For example, refrigerator manufacturers, in an attempt to make the inside bigger while keeping the exterior boundaries the same, have skimped on insulation, thus reducing efficiency 30 percent as compared to pre-World War II models. Given time, he said, we'll have models with "bigger insides than outsides." Other practices, such as putting the motor on the bottom instead of the top of the fridge, and installing the appliance near a stove, waste energy.

"We ought to have a contest, this be-

Mustang Daily—Sean Thonson

Amory Lovins in the Cal Poly Theatre Tuesday night.

ing a technical school, to see if anyone can come up with a dumber way to use electricity," he said.

Better housing, too, could save energy. The average home has about one square meter's worth of holes in it through which the wind whistles, he said. Weather stripping all homes could solve this and save 2½ million barrels of oil a day. Houses using rooftop solar collectors, passive solar designs and new heat-exchange systems can keep homes at comfortable temperatures, whatever the outside climate with no conventional heating or cooling whatever, he said.

Our cars also belie how little energy we actually need, he said. While the average Detroit auto gets 16 mpg, some Volkswagens get 60 to 65 mpg; an advanced diesel not yet on the market gets 60 mpg in the city, 100 mpg on the highway.

Lovins, who left Oxford University as the youngest don in 500 years, calls these efficiency measures "technical fixes," whereby we get more from less with no lifestyle changes. They would, he said, enable us to grow economically with no increase in energy use.

Cal Poly to get new computer, but not right one

BY JEFF LEVY

Staff Writer

Cal Poly will receive a new computer this summer, even though the new CDC Cyber computer is not exactly what's wanted or needed, according to the head of the computer advisory committee.

Jens Pohl, architecture professor and head of the computer advisory committee for the past eight years, said Poly wanted two separate computers—one for administration and one for instructional purposes.

The new computer will have a capacity three times the current need of Cal Poly, according to Pohl. But it will only be three years before Cyber's capacity is used up, he said.

Cyber is part of a California State University and Colleges system-wide procurement which includes 20 different computers—one at each campus and one

at the Chancellor's office.

The Department of Information Systems, which composes one third of the Chancellor's office staff, made the decision to go with a system-wide procurement, a decision which Pohl sees as not being cost efficient.

"DSI and the whole system could have saved money," said Pohl. "Our IMB 360 (the current computer system on campus) cost us \$1 million when we bought it. We could get a similar system today for about \$50,000."

Pohl sighted the rapid development of computers as the main reason for the impracticality of the new system.

In addition to wanting separate computers for administration and for instruction, Pohl said, "we were opposed to the concept of a state-wide procurement because the state of the art is changing so rapidly. Cost savings that

you can achieve are not going to be realized because of the time element."

Cyber will also be a little less practical than the type of system Pohl would want for Cal Poly. Cyber is a batch system. Normal batch systems do not allow interaction, as information is submitted and there is a time lapse before the results are returned. Cyber does however have some capacity for interaction at its 70 terminals. Time sharing systems which allow direct interaction, are more practical said Pohl.

Cyber is a "batch with time share interface, a sort of hybrid," he said.

"We have a computer science department that has special needs, said Pohl. "But we are fighting a high bureaucracy."

Pohl said that the computer advisory committee has a goal of cutting down costs at the computer center. He said

that the most expensive component of computers today is the user and that by 1985 he wants to have cut the computer center to one-third its current size.

Curtis Gerald, special computer advisor to President Warren Baker, had a slightly different view of the computer. He said that "Cyber is a major upgrade, at least 10-fold."

"We can't refuse it," he said. "We wouldn't anyway. Everything that the Chancellor's office develops for the CSUC system will have to be plugged into Cyber." There are currently two new services being developed for the system—one to handle all student data and one for financial data. Both of these new services will be accessible only through Cyber.

"We need Cyber," said Gerald.

Pohl agreed, but thought Poly could have received something more suitable.

Reagan may discuss oil leases

SAN FRANCISCO (AP) — President Reagan was urged Wednesday to meet with a delegation of California elected officials to discuss the impending decision on opening portions of the state's scenic coast to oil exploration.

Interior Secretary James Watt is expected to make a final decision this month on Lease Sale 53, which would open four major tracts off the northern and central coast to exploration.

The move is opposed by most elected officials in the coastal counties affected, and Gov. Edmund G. Brown Jr. has threatened to take Watt to court if he opens the tracts.

A letter to Reagan signed by 20 members of the California congressional delegation says it is "imperative" that there be an opportunity for a bipartisan group of state and local officials to "express their concerns about the impact of this proposed decision on their coastal jurisdictions..."

The letter says the delegation, through resolutions passed by several county boards of supervisors, has "developed a viable alternative to leasing for the northern four basins of Lease Sale 53."

Joe Cucchiara, a Santa Cruz County supervisor, said the alternative, approved by Santa Cruz, Humboldt, San Mateo and Marin counties involves matching the expected energy yield by conservation.

"Based on the 20-year life cycle of the basin, we can produce more energy through conservation than are available in net energy coming out of the basin," he said.

Cucchiara said the delegation is prepared to travel to Washington if necessary to meet with Reagan.

For counties like Santa Cruz which depend on the coast for its financial well being, "our concerns go far beyond what would happen at the time of an oil spill," said Cucchiara. "It is our contention that those local issues have not been addressed."

Rioters arrested in South Africa

JOHANNESBURG, South Africa (AP) — Riot police used tear gas, clubs and attack dogs on mixed-race high school students mobilizing for a demonstration Tuesday, and authorities said 60 youngsters were arrested.

Witnesses reported widescale beatings by the riot squad. They said at least two pupils were hospitalized, while others were treated for minor injuries and released.

They also said they saw women and bystanders beaten and chased into homes.

Newsline

Democrats fail to back tax plan

WASHINGTON (AP) — House Democrats tried for more than two hours Tuesday to reach a consensus on a tax cut, but apparently agreed only to support whatever plan is drafted by the Ways and Means Committee.

"You can be sure it won't be three years," Speaker Thomas P. O'Neill told reporters, referring to the length of the tax reduction. That would rule out President Reagan's three-year plan, which Democrats have attacked as inflationary.

Democrats on the Ways and Means Committee are moving reluctantly toward a proposed two-year tax reduction, but there was no assurance that will be the final shape of their proposed compromise. Those committee members planned another session Wednesday afternoon in an effort to reach a consensus.

"Whatever Danny Rep. Dan Rostenkowski, D-Ill., Ways and Means chairman comes out with, if he can forge a coalition in committee, the leadership will be supportive," O'Neill said.

After the caucus, O'Neill continued to criticize Reagan's program, which originally called for an across-the-board 10 percent cut in individual tax rates in each of three consecutive years. Reagan has indicated a willingness to compromise.

Pass such a plan, the speaker said, "and you'll have deficits like you've never seen in your life.... It's a sure way to decimate the budget of the U.S. government."

Democrats on Ways and Means met for two hours Tuesday without agreeing on a tax cut plan. Rostenkowski said there were "no votes, no conclusions," but that the possibility of a multi-year tax bill was discussed.

He added that Democrats still want additional relief for low and middle-income families, weighting the benefits of a tax cut in favor of those with annual incomes between \$20,000 and \$50,000 a year.

Reagan's plan would provide tax cuts for rich and poor alike, regardless of income. Democrats have viewed a one-year tax reduction as holding less risk of worsening inflation and have urged proportionately more relief for those with incomes under \$50,000 a year.

Deputy White House press secretary Larry Speakes declined comment today on the Democratic search for a compromise.

Reagan backs private schools

WASHINGTON (AP) — The Reagan administration Tuesday endorsed special tax credits to help offset the cost of private education but urged Congress to delay such legislation until the president's tax-cut plan is enacted.

John E. Chapoton, assistant treasury secretary for tax policy, told the Senate Finance subcommittee on taxation that such credits are preferable to other types of federal aid to education, which involve cumbersome red tape for government and families alike.

"Tuition tax credits offer a simpler means to fund private education they themselves select," he said.

Although President Reagan's economic program must take priority now, Chapoton said that "tuition tax credits will be at the top of our agenda at the appropriate time."

Tuition tax credits have been proposed in the past but always have run into trouble in Congress from those who fear they conflict with the Constitution's requirement for separation of church and state, and from those concerned that such aid would come only at the expense of public schools.

A bill sponsored by Sen. Bob Packwood, R-Ore., chairman of the subcommittee, and Sen. Daniel Patrick Moynihan, D-N.Y., eventually would allow a person to subtract up to \$500 from his or her tax bill to help offset costs of education at a private elementary or secondary school or at a private or public college.

The tax credit would start at a maximum \$250 during the 12 months beginning Aug. 1, 1982, and rise to a limit of \$500 after that. The credit would become available Aug. 1, 1984, for graduate and part-time students.

For families whose incomes are so low that they owe no taxes, the bill would allow the government to provide a check of up to \$500 for education expenses.

EPA cites plant for diesel spill

FRESNO (AP) — A federal complaint has been filed charging that the builder of the Helms hydroelectric project failed to submit an oil spill control plan, a state fish and game warden said Wednesday.

The complaint was issued by the Environmental Protection Agency in response to a diesel spill in Wishon Reservoir at the high Sierra construction site 50 miles east of here, said warden Rob Floerke.

Meanwhile, his report recommending criminal prosecution of the project's owner, Pacific Gas & Electric Co., and the contractor, Granite-Ball-Grove, will be submitted to the Fresno County district attorney Friday.

Athletic budget proposal cuts seven minor sports

From page 1

Buccola said he was given the same funds as last year to set up the 1981-82 athletic budget proposal and this money would not fund the entire program. Therefore, the seven minor sports were cut. However, Buccola said at the end of the proposal he asked for an additional \$32,000 to fund these seven sports.

If the \$32,000 is approved, then the sports will remain in next year's budget, said Buccola. If only some of the money is granted, the sports will be cut in a priority ranking order, he added.

The criteria considered in ranking the sports were the sport's ability to bring income, spectator interest, national recognition, the number of students involved and available staffing.

Buccola said the problem of staffing is constantly getting worse. At present, he said, most coaches only work part-time. If some coaches are let go, then others will go full-time before additional coaches are hired.

Heaton said there simply is not enough money to fund the present program. Two football coaches were cut so "you can't say we are just picking on minor sports," he said.

Buccola said that over the years some money has been taken from the profits in football and given to other sports, "but this just gets so thin." A 50-cent increase on football tickets was also included in the proposal to increase next year's revenue.

Buccola said that he would rather fund high-priority sports fully and cut minor sports because, he said, that morale gets bad when sports are funded inadequately. He said that in the past, the water polo team has agreed to work for minimal funding, just to be sure the team was maintained. But later in the season, the team players kept asking for more funds and became frustrated when they couldn't get the money.

In retrospect, Buccola said, Cal Poly should have gotten rid of some sports years ago, as some other universities did when Title IX first took effect. He said this wasn't done because he favored a broad-based program whenever possible. "We've been fighting it, but it's come to the point where the dollars just aren't there," he said.

The students showed an interest in fund raisers to help support their specific teams. West said that while fund raisers are encouraged, the profits cannot be given directly to the team that raised them. Under Title IX, sports have to be provided for in a proportionately equal manner. West emphasized that any income must be looked at in the concept of the entire program.

It was brought up that under Block P, a sport could raise money and 10 percent would go to ASI and the rest to the specific sport. Buccola said this would be looked on as a violation of Title IX and the money actually should go to the athletic director. He added that this doesn't mean they have to look at things dollar for dollar, but fund raisers cannot be irrespective of all

Mustang Daily—Sean Thomson

The potent pitching arm of Mustang softball pitcher Sheila Langrook will be silenced next year if softball and six other minor sports are not given Instructionally Related Activities funds.

other income.

West said that if a team shows a desire to raise funds, the athletic director would do what is possible to help fund them and find staffing, but the fund raising must remain in perspective. For example, if only men's sports raise funds, the athletic director cannot solely help fund these sports and ignore women's sports.

Buccola said that he does not hold much hope for fund raisers, since last year each team was supposed to raise funds and tennis was the only one that came out with extra money. Since the money did not come through last year, he cannot put it into the budget proposal and expect it to be there next year.

The athletic department has gone to alumni and booster groups to raise funds also, said Buccola. A jogathon included in next year's budget is expected to net more than \$30,000.

Huff said ASI is giving \$29,000 to the IRA Board with a recommendation that \$8,000 be given to fund minor sports. West explained that if this money is approved, athletics cannot receive full funding from other sources, making the benefit to minor sports only \$4,000.

The IRA will have final budget proposals late this week and will then send them to President Warren Baker for approval.

Ag Graduates

The Association of Graduate Students in Agriculture will have its final meeting of the year today at 11 a.m. in Ag 226. They will elect new officers, select an advisor and plan activities for summer and fall.

ASI Outings

ASI Outings will be sponsoring the following trips for the summer quarter break: Canyonlands-canyoneering, Central Coast bike tour,

Deschutes river rafting, Olympic Peninsula backpacking and Catalina Island skin diving. More information is available at the Escape Route.

Shakespeare play

The Cal Poly Studio Theatre and Alpha Psi Omega is presenting a one-act play from William

Newsline

Shakespeare's "A Mid-Summer Night's Dream." The play, "Pyramus and Thisby," will be staged tonight and Friday night at 8 p.m. in room 212 of the Davidson Music Center. The cost is \$1.

Delta Sigma dance

The WHIPS interest group of the Delta Sigma Theta sorority will have an end of the year dance Friday in the Mustang Lounge. The dance will begin at 9 p.m. and the cost is \$1.50.

SAM meeting

The Society for the Advancement of Management will have its last meeting of the quarter today at 11 a.m. in Ag Eng 123.

Craft classes

The Craft Center is offering a variety of craft classes this summer. Signups for the classes will be taken in the Craft Center on June 24, from 6 p.m. to 9 p.m.

Large crowd is expected for Poly commencement

Over 10,000 persons are expected to be in attendance when Cal Poly holds its 75th annual Commencement Ceremony on Saturday, June 13.

Scheduled for 10:30 a.m. in Mustang Stadium on campus, the traditional event will see degrees and certificates conferred by the university's president, Dr. Warren J. Baker, on some 3,500 candidates.

President Baker will also introduce Reg Murphy, editor/publisher of the San Francisco Examiner, who will deliver the commencement address.

Also scheduled to take part in Cal Poly's 1981 Commencement Ceremony are the university's vice president for academic affairs, Dr. Hazel J. Jones, who will present the degree candidates; Willie Huff, who will present the student comment; and the Rev. Gene M. Haraldsen and the Rev. Vern Haynes,

who will give the invocation and benediction, respectively.

Huff, president of Cal Poly's Associated Students Inc., is a resident of San Ramon and an English major.

Rev. Haraldsen is senior pastor of the First Assembly of God Church in San Luis Obispo and Rev. Haynes is pastor of Springfield Baptist Church, also in San Luis Obispo.

Music for the campus graduation ceremony will be provided by the 65-member Cal Poly Symphonic Band under the direction of William V. Johnson of the university's music faculty.

Also scheduled on commencement day at Cal Poly is the Senior Breakfast, and an initiation ceremony for new members of Phi Kappa Phi national honor society. Both will begin at 8 a.m.—the initiation in the

Cal Poly Theatre, and the breakfast in Chumash Auditorium of the Julian A. McPhee University Union.

Other commencement season activities at Cal Poly will include the traditional Tree Planting at 11 a.m. on Thursday, June 4, on the lawn of the Cal Poly Theatre, and the Senior Barbecue at 2 p.m. on Saturday, June 6, in Poly Grove.

The Commencement Ceremony and Spring Quarter final examinations, which run from Tuesday, June 9, through Friday, June 12, officially end the university's 1980-81 academic year.

The new academic year will open with the first day of classes for the Summer Quarter on Monday, June 22. Students completed computer assisted registration for Summer Quarter courses several weeks ago.

70-year-old 'Wonder Woman' routs burglar pair

LOS ANGELES (AP) — As a neighbor shouted "You're Wonder Woman!" 70-year-old Wanda Capek chased two burglars down the street with a cudgel, frightening them so badly they left the loot behind and drawing so much attention that police were able to arrest them, officers said Wednesday.

"I'm from Chicago and I'm tough," the feisty schoolteacher said after the incident Tuesday. "I was looking for a hatchet. I would have cut their heads off. If you let those punks know you're afraid, they'll hurt you."

She said she came home from school early to find the men in her yard. "Where's my hammer?" the 5-foot, 3-inch Ms. Capek yelled when she saw them. "I'll get the hammer and kill you."

Ms. Capek said she shoved the larger of the men and, when he tried to shove her back, she kicked him in the groin. He dropped the TV set and took off for the gate.

The plucky school teacher then brandished a large wooden cudgel at the second man, who followed his

companion out of the yard and down the street, leaving another set in the yard.

A neighbor, watching the drama unfold from a nearby yard, shouted encouragement.

"She yelled at me in broken English, 'You're Wonder Woman!' the 70-year-old teacher said proudly.

Ms. Capek chased the two men to a parked van where a passing motorist used his car to prevent them from

driving away. Police officers picked up the chase and captured the pair.

Carlos Garcia, 25, and Mike Maldonado, 20, were booked for investigation of burglary. Police said the van and its contents had been reported stolen.

Ms. Capek, who teaches at St. Casimir's School, said she left school early after a neighbor phoned and reported something suspicious was going on at home.

Political science major to head Poly Royal Board

Brian Corcoran of La Canada, a junior political science student, has been elected to head the student board that will stage the university's 1982 Poly Royal festival.

One of the largest and best-attended annual cam-

pus open house programs in the Western United States, Poly Royal will have its 1982 renewal on Friday and Saturday, April 23 and 24.

As general superintendent of the event, Corcoran will lead a group of 10 com-

mittee chairmen who will compose the Poly Royal Executive Board, and an additional General Board of up to 100 members that coordinates the myriad of

educational exhibits, fine arts activities, athletic contests, and special activities that make up the campus festival.

Alternative energy Pied Piper urges 'soft paths'...

From page 1

Estimates of our energy use and need vary according to the source, he said. Quoting Aldous Huxley, "...all knowledge is fated to start as heresy and end as superstition," Lovins divided predictions of how much energy the United States will need by 2000 AD into four categories: "Beyond the Pale"

(Lovins' figures), "Heresy" (Sierra Club), "Conventional Wisdom" (executive agencies) and "Superstition" (Department of Energy and power companies). In 1972, Lovins predicted we would need 125 quads and the power companies predicted 160; by 1975, Lovins predicted 75 quads, and power companies and the

DOE predicted 124. So Lovins' 1972 estimates became the 1976 conventional estimates.

Lovins also cited a study by Robert Sant in the *Harvard Business Review* that posed the question: How much energy would Americans have used in 1978 if, for the past 10 years previous, we had followed a "least-cost

strategy" of using the cheapest form of energy available? The answer: 28 percent less oil, 34 percent less coal, 43 percent less electricity, and we would have spent 17 percent less money for the same amount of energy.

The same study predicted that if this least-cost strategy, emphasizing soft rather than hard technologies, were followed for the next 20 years, our total energy use would barely rise despite rapid economic growth, our oil imports would dwindle to zero, and the fraction of our GNP devoted to energy would actually go down. So, rather than driving inflation, the energy sector would become a net exporter of capital to the rest of the economy.

To answer his second question—what types of energy and scale are best suited to the task?—Lovins said we must realize there are many different kinds of energy with different prices and qualities suitable to different applications.

Traditionally, energy policy makers have ignored this, he said, "and have

treated all kinds of energy as alike, as if to say, 'All kinds of food are alike—we're running short on bread and cheese and turnips and potatoes, but that's OK, we'll substitute sirloin steak.' We can't afford to do this with food or energy, Lovins said, and by relying on electricity—producing power plants and their costly product, we are opting for the sirloin steak of energy.

Since when does logic have anything to do with the NRC's licensing decisions?

Amory Lovins

We should, he said, choose the form of energy which will do the required task in the cheapest way, and is most appropriate for the end-use of that energy. In this country, for example, of all the energy needed at the point where it's finally used, about 58 percent is necessary for heating—a high figure, considering the amount of energy burned to get the fuel needed to produce the heat energy in the first place, when soft

technologies can supply ample heat.

Thirty-four percent of our end-use energy needs require portable liquid fuels, and percent need electricity. But this 8 percent, he said, is already supplied two times over by existing power plants. In other words, we already have more than enough power plants to provide electricity for those things that require it over other forms of energy.

Using expensive electricity for tasks that can be completed with cheaper alternatives is like "cutting butter with a chain saw" or starting "a forest fire to fry an egg," he said.

We are, therefore, asking the wrong question, he said. Instead of debating which is the "best kind of brandy to burn in our cars," or how much a new power plant will cost, we should look at electricity's real competitors, such as weatherstripping and solar.

These alternatives cost 0.4 cents per kilowatt hour. The running cost alone of Diablo Canyon nuclear power plant, if licensed will be 2 cents per kilowatt

... in solving the energy demand-supply problem

Mustang Daily—Susannah Perkins

Amory and Hunter Lovins in UU 219 during a press conference before their lecture.

From page 6

hour, Lovins said. Since the alternatives are cheaper, "we're better off not running it."

Lovins, who believes decentralized power sources are more efficient, cheaper and philosophical-

ly superior to the current system, said the Nuclear Regulatory Commission knows the dead-end economics of nuclear plants, "but since when has logic had anything to do with their licensing?" When asked at the press

conference if the fate of the Diablo plant will determine the future of the nuclear industry in this country, Lovins replied the industry is already dead, but Diablo will determine "how long it keeps twitching."

In answering his third

question—what do we need energy for?—Lovins again turned to the virtues of conservation, or energy efficiency. (The Lovins shy from the term 'conservation' ever since former President Carter's TV appearance, in which he wore a sweater and said we must all suffer a little, gave it a bad name.) Even if Detroit was to add as much as \$100 billion to the \$50 billion it now plans on spending to retool auto factories and used it to produce 60-mpg-cars, this would add only \$750 to the price of each automobile. "I really wish we had an economically conservative government," he said.

Although an economic Jeffersonian, Lovins said the most efficient way the government could subsidize the energy industry would be to invest in weatherstripping and soft technologies, which are, he said, diverse, renewable, relatively simple and understandable (but not unsophisticated), and are matched in scale and energy quality to end-use needs.

The least efficient way would be to invest in synthetic fuels and power plants, which is exactly what governments have

been doing, he said, adding that, under free-market conditions, soft technologies would triumph even without considering its other advantages—less environmental damage, less effect on the climate, less nuclear proliferation and greater energy security.

And the best way to implement a soft energy policy? Lovins said it is implementing itself.

"People are smart," he said; they will buy what's cheapest. Many new solar buildings are being constructed; 15 percent of tract home contractors give as an option to home

buyers passive designs; 150 factories in New England have switched from oil to wood. Despite the \$40 billion in government subsidies over the past 30 years, nuclear plants have provided only half as much energy as wood, which grows without government subsidies, he said.

Hunter Lovins concluded, saying the answer to the energy problem "is right in this room." What we have to do, she said, is follow the advice of folk singer Kate Wolf: "Find what you really are about and live a life that shows it."

GRADUATION CAKES SUMMA CUM LAUDE IN DESIGN, TASTE AND NUTRITION!

***and we'll deliver 'em, too!**

At The Upper Crust, your graduation cake will be made from scratch, the way you'd make it if you only had the time. Because ALL our products are made that way ... with the finest ingredients available ... unbleached flours and El Molino stone-ground whole wheat flour; pure butter, cream and yogurt; rich brown sugar, molasses and local honey; imported vanilla, rum and other flavorings; fresh carrots, bananas and other fresh fruit. And we add no chemical preservatives, stretchers or enhancers.

Of course, a cake that earns a 4-point average in flavor and nutrition HAS to get honors in design, or it's no fun! So the decoration on each of our cakes is carefully customized to make every one an individualized beauty!

*But the best part is ... WE WILL DELIVER, for the Cal Poly Graduation on June 13th. And you can order by phone! For more information, call 927-8227, and ask for Kathe.

Now, that you've made the grade, make sure your graduation cake will, too!

Poly set for overseas tour

The New Zealand teams play under the international or Olympic rules which have caused some variations in practice routines the last month.

ORIGIN

Athletes, coaches honored at annual awards evening

Several athletes and coaches were honored Tuesday night at the annual women's athletic banquet.

The Cal Poly staff dining room was packed as each one of the women's coaches presented their own coaches trophy for outstanding achievement, leadership and sportsmanship. Official recognition was also given to Poly's athletes and coaches of the year.

Coaches Award winners included Diana Deutsehman for volleyball, Laura Buehning in basketball, Lorie Fiertle for softball, Maggie Keyes for cross country, Chris Dubois for track and field,

Tammi Whitmore in gymnastics, Lori Bottom in swimming and diving and Page Wilkins for tennis.

The introduction of each athlete was as diverse as the coaches themselves.

Said Marilyn McNeal of Buehning, "She is the first All-American in basketball that Cal Poly has ever had. She certainly is the greatest skilled athlete that I have ever coached."

"I am giving this award to the player who had the most determination on our team," Kim Graham said of Fiertle. "She would do anything for an out and she saved our skin several times. She was also our only all-league player."

"Definitely, there is only

one girl who fits the bill of this award," Proctor said of Whitmore.

Player of the year awards in the Southern California Athletic Association were officially given to Keyes for her efforts in cross country last fall, to Marie Lundie, in volleyball, to Buehning for her All-American season this winter, to Susan King, Pam Dickie and Donna Haas in gymnastics and to Eileen Kraemer following her conference and national track championship wins in the 1,500 meters.

Conference coach of the year honors were given to Wilton, Harter (for both cross country and track) and Proctor.

Sophomore Chris Dubois (left) beams with joy after being presented with the Coaches Award for track and field. The award is presented by women's track coach Lance Harter at the annual awards banquet.

INTRODUCING...
A NEW LIVE ALBUM

Amy Grant In Concert

Amy Grant, the vivacious young coed from Nashville, is loved coast to coast. She has sung in schools, concert halls and churches, and people everywhere love her fresh, honest approach to her faith in Christ.

Capture the essence of Amy Grant in her new live album, "In Concert" which features a collection of all the great songs (as well as several new tunes) that have established Amy as a favorite. There's more to Amy than music. Hear for yourself.

Anyone finding the backpack is asked to call Elissa Stevens at 543-1943.

tle. Along the way he set school season and career passing marks.

Newcomer of the year is bestowed upon freshman Ken Rowe. The frontline phenomenon from Hawaii almost led the volleyball team to the Western Collegiate Volleyball Conference championship. Other candidates included former Olympian javelin thrower Karin Smith who won the national title and reset the national collegiate mark, and junior transfer Kevin Lucas. Lucas averaged 12.1 points and 5.3 rebounds per game for Ernie Wheeler's basketball team.

Best single game of the year goes to basketball player, Laura Buehning with her school record set-

ting 37 points against Nevada-Las Vegas followed by Louis Jackson's 55 carries in the Boise State football game.

On the lighter side, the hardest hit of the year goes to coach Ernie Wheeler for his wicked chair-breaking right in the Los Angeles State game at home. The "whoops" award will be co-shared by basketball players Pete (Airball) Neumann and Ernie (Sixth Timeout) Wheeler for their respective goofs in the regular season-ending game against Bakersfield.

The "Gee, I'm Sorry" award goes to the two umpires who are probably still trying to find the Poly-Santa Barbara women's softball game they were supposed to work.

Mustang Daily—Vern Ahrendes

Outstanding achievement after just one year at the helm of the men's water polo team qualified Russ Hafferkamp for the Mustang Daily's First Annual coach of the year award.

Enduring spirit

The human spirit—it has been kicked around, battered, bruised and distorted this year. And yet somehow it continues to endure.

We witnessed the shock and agony of once again seeing the attempted assassinations of world leaders. The events, especially the shooting of the pope, shook the very foundations of civilization, and once again we wondered just what kind of a world we were living in. We were reassured by their rapid recoveries.

There were some good things, to be sure. The Polish labor movement a rebirth of nonviolent activism in the world and a victory for individual freedoms. The Poles proved we can make a difference simply by standing together and saying "No." They are, truly, the hope of the world.

As students, we also persevered. It often meant forcing ourselves to make a 100 percent effort—and sometimes finding that 100 percent was not good enough. We press on.

The human spirit—we wonder if it exists, if it's a common denominator that ties all of us together. Certainly there are interests common to all the cultures, races, nations, ideologies and religions that envelop our world. All people wish to see a better world for their children, to live in peace, to have a little self-control in their lives and, ultimately, to be able to be themselves.

It's a fragile spirit. When those we believe in die needlessly and sensibly when they are so young, we wonder why. But after a while we press on.

Turn-of-the-century labor leader Eugene Debs once summed it up rather nicely: "While there is a lower class I am in it. While there is a criminal element I am of it. While there is a soul in prison I am not free."

So we press on.

Letters

Nukes are needed

Editor:

I am writing in response to Mark Kelly's letter on May 28. The letter that he wrote was a rebuttal to an earlier letter of mine.

In the letter, Mr. Kelly said that nuclear power is dangerous to the environment. He said that we should not spend money on nuclear power, but rather on other alternative sources of energy. This sounds nice, doesn't it? Wouldn't it be nice if we could sit around for twenty or thirty years and wait for a new source of energy to be developed that is clean, not dangerous and practical? It would be nice, but we can't wait.

Mr. Kelly seemed to have missed the main point of my last letter. It was that a war is inevitable if we don't find a new energy source very soon. The citizens of the U.S. and the world cannot and will not conserve enough fossil fuels to make our supply last any significant amount of time longer. So what will happen is that the U.S. will keep trying to get enough oil out of the Persian Gulf to supply our needs. But, other countries, such as the Soviet Union, will want enough oil to supply their own countries. A war is almost inevitable. And with the destructive power which major countries possess, there is a bleak outlook for the future of the world if we don't implement a new energy source soon. There are no other alternative sources of energy that are ready now.

Let's say that we don't use nuclear power, and the load of being the world's energy supply remains on fossil fuels. What does the future of our environment look like? First, we will have to do more off shore oil drilling, because oil is just not as plentiful as it used to be on the mainland. This means more oil drilling like Lease 53, and oil spills don't help the environment. Also, have you ever seen what coal mining does to a mountainside. It is a very ugly sight. We could sit back and watch the environment go to hell and have our natural resources totally depleted, or we could start to implement nuclear power.

It would be nice if our energy could be supplied in the same way that it was for the past fifty years. It would be nice, yes, but let's be realistic. We need nuclear power now!

Joe Busch

Remove the Bent

Editor:

Cal Poly has had a long standing policy against placing organizational monuments on campus. For example, consider the bent. The Bent is the first of its kind on this campus, and in my opinion a mistake, egotistical, self-centered, and self gratifying. What kind of culture do we live in? What kind of precedent does this set?

Robert Martin

Informational weapon

Senate Bill 246, which is now in front of the state Assembly, proposes to relinquish upon request the names and addresses of all present and former university students (including drop-outs) to the National Guard and reserve components of the armed forces to be used for recruitment purposes. As a student speaking to fellow students, I feel this is another weapon in the government's growing arsenal which is being waged against the public in an ensuing battle to strip the individual of his privacy.

Gaining information about a student is easy, and any individual with the right knowledge (obtainable by one phone call) can find out everything about you, from your GPA to social security number, through the university, and there is nothing you can do about it!

Scarcely a year goes by that in some way, shape or form, the government does not pass a law abridging the individual's freedom and right to privacy. If it is not the campus police citing you for parking your moped in the bicycle rack or vice versa, it is the CAR computer explaining that you have no classes this quarter.

It isn't right that a college student who is voluntarily paying and studying to attain a higher education in hopes of

making a career and supporting this country should have his or her privacy invaded for purposes of military recruitment. In a section of the bill which was later omitted, it states that the purpose of the bill is "...to assist students who may be interested in securing the benefits and experience available from service in the armed forces..." Students are busy enough securing benefits for themselves in school, while the unemployed need to be made more aware of the opportunities available to them in the military.

Why not list only those who are collecting unemployment or welfare?

On May 14, by a vote of 23 to 8, the bill passed in the state senate. The bill is now in the Assembly, and will be voted on in June of this year. If this bill sounds like another hand of the long arm of the law reaching in to help you run your life, I urge you to take action immediately: write the assemblywoman of this 29th district (Carol Hallett, 1145 Marsh St., San Luis Obispo, Ca. 93401) and let her know your feelings on this subject, before the bill becomes law!

Worthwhile project

BY BEVERLY BRINTNALL

There is a worthwhile project developing on campus that most people are unaware of—a Greek row. For many the attitude will be "so what," and others will think it far off in the future. But in truth, the project will benefit many school departments and if things go well, construction will begin in the fall of 1982.

The proposed site is the orchard, dying of root rot, on Highway 1 and Highland Drive. The land will be divided into 14 plots with one acre parcels.

The Greeks are organizing to become a corporation to buy the land from the state. The Greek row committees consist of: Planning and Construction, chairman Pat O'Brien from Delta Sigma Phi; Finance, chairman Tom Enz from Delta Tau; Legal Aid, Jeff Witons from Lambda Chi Alpha; and Public Relations, Paul Jones from Lambda Chi Alpha. Each committee will have a faculty adviser to insure department input.

Agricultural classes will be asked to help clear the land. Architects and engineers will assist in the designs of the houses, streets, parking lots and a possible park and social hall.

President Baker and Executive Dean of facilities Planning Doug Gerard are working on a proposal supporting the Greek row and by next fall they will submit it to the state.

A row will eliminate the Greek problem in the city neighborhoods. It will allow the planning commission to research more important projects instead of the endless rezoning battles fraternities and sororities burden the city with.

Poly can work together to build this row. It is a chance for students to use their ideas and possibly see them materialize. It is a project to be aware of and a chance to get involved in expanding Cal Poly.

Author Beverly Brintnall is a senior journalism major.
